

CITRUS BOOST

Water-soluble revitalizing mix of essential citrus oils for agricultural crops

Citrus Boost is a biological product based on essential oils, obtained by cold pressing from citrus peels. This valuable plant-derived product is rich in terpenes and is used in agriculture due to its versatile applications.

Renowned professional publications recommend the mixture of essential citrus oils for their natural effectiveness in promoting plant well-being. It is suitable for treating cereal, vegetable, fruit, and ornamental plants.

Application and Dosage:

The product should be applied via foliar spray:

- **Fruit crops (apples, pears, peaches, cherries, apricots, plums, vineyards):**
1.6-2.0 L/ha, in 400-700 L of water
- **Strawberries:** 1.4-1.8 L/ha, in standard water volumes
- **Vegetable crops:** 1.2-1.8 L/ha, in standard water volumes
- **Field crops (sugar beets, cereals, potatoes, onions):**
0.6-1.0 L/ha, in 200-400 L of water

Compatibility:

This product can be mixed with all common plant protection products. However, the manufacturer recommends conducting a mixing test before use.

Container size: 5 L (5.7 kg)

Composition:

Mixture of essential citrus oils in aqueous solution.
For use only in the specified applications.

Technical Data:

Specific weight at 20°C: 1.14 kg/L
