

DIATOMITE FLOW

Diatomite product for foliar application

Diatomite Flow is a liquid formulation of natural diatomite for agricultural use. The porous and sharp structure of the diatomite particles forms a physical protective barrier on plant surfaces after application and acts as an insect repellent. Environmentally friendly and free from unwanted chemical residues, it is perfect for organic farming.

Mechanical function of the product:

The sharp, crystalline structure of the diatomite damages the protective cuticle of soft pests (such as aphids and mites). The porous structure of the diatomite absorbs moisture, thereby reducing conditions favorable for fungi and pathogens and reducing water stress in plants.

Application and dosage:

Cereals, rapeseed, beets, potatoes, onions:

From the 4-leaf stage, 2.5 L/ha in 200-500 L water.

Reapply every 14 days during new growth.

Mixability:

This product should not be mixed with other products!

Packaging: 5 L (5.75 kg)

Composition:

Natural, finely milled diatomite: 20%
